

PROFESSIONAL LINE

PANCREATONE™

Tones and balances pancreas
for optimal function

The pancreas is located deep in the abdomen between the stomach and the spine. It secretes digestive enzymes that help break down and digest proteins (protease), fats (lipase) and carbohydrates (amylase) in the small intestines as well as the hormones insulin and glucagon which work together to regulate blood sugar levels.

The Pancreas helps with digestive functions, producing and releasing digestive enzymes and an alkaline fluid called pancreatic juice. These are transferred via a system of ducts within the pancreas into the small intestine to alkalize the intestinal contents. The pancreas also secretes digestive enzymes that help in the break down of proteins (protease), fats (lipase) and carbohydrates (amylase) in the small intestines.

The Pancreas also produces and secretes the hormones, insulin and glucagon, work together to maintain the proper level of sugar (glucose) in the blood to be used by the body for energy.

USE GUIDELINES

Test Against Chapman Pancreas Point,
Leg Length,

Apply to pancreas which is located on the left side of the body. If you put your hand on your belly button and move over to the left then up until you feel the ribs, your hand will be over the pancreas.

Olfactory receptor stimulation effective.

Pancreatic Overload & Fatigue is Rampant

Stress-related cortisol in the body and the consumption of sugars or too many carbohydrates can force the pancreas to constantly release insulin, leading to pancreatic fatigue, low enzyme levels, hormone imbalance, digestive distress and low energy.

The Professional Line PANCREATONE™ Blend is uniquely formulated to tonify and support the pancreas for overall vitality and function.
