# PARASYMPATHETIC™

Triggering the Parasympathetic response for Optimal Digestion

## Digestion Begins in the Parasympathetic State

The brain and the autonomic nervous system need to be in a parasympathetic state to signal the vagal nerves, (two cranial nerves that extend from the brain stem to the abdomen).

When you stimulate the parasympathetic nervous system, all downstream digestive function improves.

This triggers all the parasympathetic responses in the digestive cascade, including stomach production of HCL, the release of pancreatic enzymes, the gall bladder's release of bile for fat digestion in the duodenum, the work of brush border enzymes in the small intestine and all the sphincters including the lower esophageal sphincter.

### Stimulating Vagal Nerves Triggers the Parasympathetic Responses and Activates:

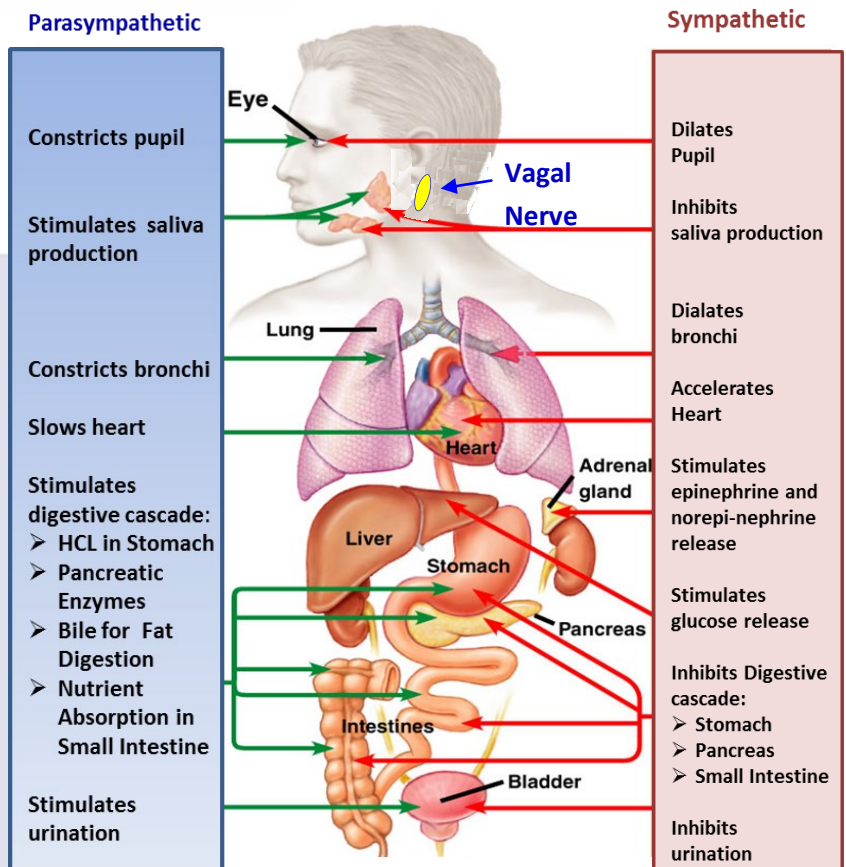

- HCL in Stomach
- Pancreatic Enzymes
- Bile for Fat Digestion
- Nutrient Absorption through brush border enzymes in Small Intestine

## USE GUIDELINES

**Test Against** Digestive points and Vagus Nerve (behind ear, anterior to mastoid bone on the neck). To LNT, apply oil to vagus nerve and re-palpate digestive points.

**Apply** before meals to vagal nerve (behind earlobe on mastoid bone)

The Professional Line PARASYMPATHETIC™ Blend is uniquely formulated to stimulate the parasympathetic nervous system to optimize digestion, absorption and assimilation.
